

Internship Paragraph
Ashley Hanna
12/13/14

My name is Ashley Hanna and this year I have interned at three places: Cardiology Associates of Savannah, Savannah Plastic Surgery, and Savannah Arts Academy for the Junk2Funk photo-shoot. For my first two internships, I shadowed doctors in two different medical fields. I learned a lot about Cardiology and Plastic Surgery by watching procedures and appointment consults. I am not allowed to work on any patients because I am not a medical

student yet. I listen to how the doctors interact with their patients. My favorite thing about internship is seeing how doctors use what they know to help their patients. This program has helped me make decisions about my future by giving me an idea of what a doctor really does. I have always wanted to help others and this profession is a very good way for me to do that in my future. I have made connections with community leaders, which will help me have people I can look up to as role models. I

now have people I trust and can go to for advice in the professional area I wish to peruse. My other internship was with Kinte Taylor as Assistant photographer for the Junk2Funk Fashion show photo-shoot and I take many of the models' pictures. I also help set up many of the model positions. I put my knowledge of lighting and studio set up to help set up the studio lights and the backdrop the first day. I have had many favorite moments at my internship. Most of them have to do with making people smile and brightening their day. They coolest thing I have done so far is seen surgeries in the Plastic Surgery office.
